Exercise Hours per Week and Hours of Sleep
Exercise Hours per Week and Hours of Sleep by ID

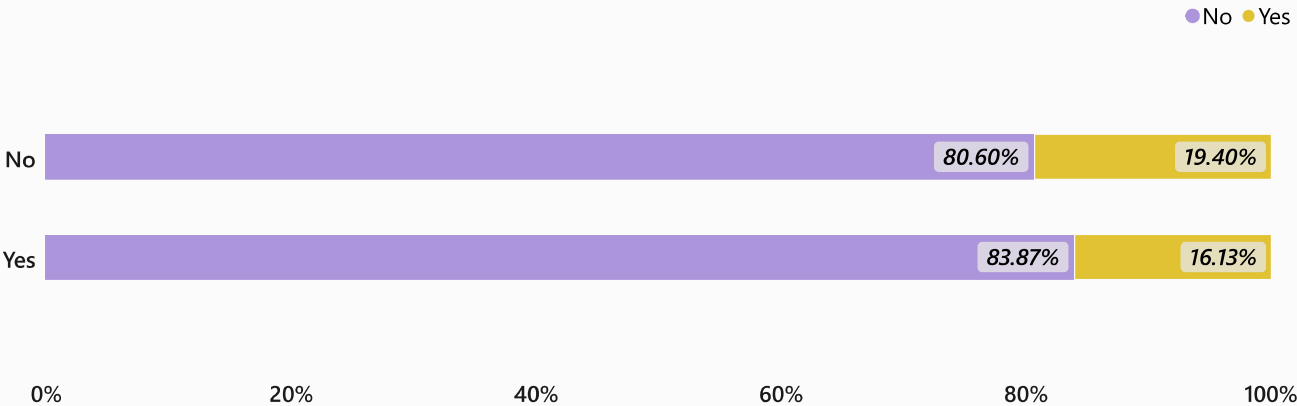

The *Vita Track Wellness Dashboard highlights* an active user baseline averaging *10.72K steps*, but exposes key imbalances as *Young Adults* fail to match high calorie intakes with proportional movement. Furthermore, a critical overtraining trap exists where extreme exercisers logging *8–10 weekly hours* are bottlenecked within a restricted *4–6 hour sleep window*. To optimize health outcomes, Vita Track should deploy automated recovery alerts urging high-output users to balance intense activity with vital rest.

ID
Heart_Disease and Smoker Status

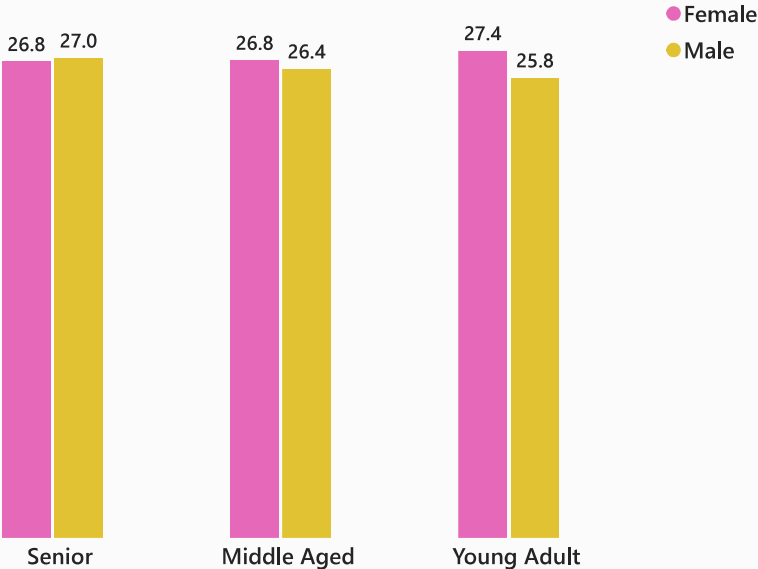

The Vita Track Heart Risk Analysis highlights a baseline heart disease prevalence of 9.3% across our user base. A clear lifestyle risk correlation is visible, showing that active smokers constitute a higher proportional chunk (19.40%) of the positive heart disease group compared to non-smokers. Furthermore, cross-referencing these metrics confirms systemic stress within our users' vitals, as active smokers exhibit an elevated average resting heart rate of 85.19 bpm.

Smoker	Heart Rate	Systolic BP	Diastolic BP
Yes	85.19	114.52	73.98
No	84.60	113.81	75.06
Total	84.71	113.95	74.85

Organization Vita Track Wellness

BMI
By Age Group and Gender

The Vita Track Demographic Explorer reveals that average body mass indices remain relatively uniform near the overweight boundary across all groups, peaking slightly among Young Adult Females at a *BMI of 27.4*.

Crucially, population cohort segmentation isolates the Sedentary Group as our highest strategic priority, as it encompasses *454 users* who suffer from a compounding combination of *restricted sleep (6.86 hours)* and *the highest aggregate Heart Disease Rate of 10.35%*.

To optimize organizational well-being, Vita Track must deploy early preventative interventions and structural fitness challenges targeting this highly vulnerable sedentary cohort.

Activity Segment	Heart Disease Rate	ID	Hours of Sleep
Active Lifesters	9.31%	290	7.07 hours
Moderate Processors	7.42%	256	6.81 hours
Sedentary Group	10.35%	454	6.86 hours
Total	9.30%	1000	6.91 hours
